Re: 99P-1340/CP 1 -- Petition to Have "Eternity eau de parfum" Misbranded

To Whom It May Concern:

I am writing in strong support of the Environmental Health Network (EHN)'s petition to have Calvin Klein's "Eternity" declared misbranded. The FDA must give this petition the scrutiny required by your regulations: 21CFR Sec. 740.1, 21CFR Sec. 740.2, and 21CFR Sec. 740.10. Regulation 21CFR Sec. 740.10.

Because many ingredients in "Eternity" are known toxins, and many others have not been tested for safety, "Eternity" is not following the guidelines the FDA has set for safety in cosmetic products and should therefore, in accordance with your regulations, be labeled with the following conspicuous statement on the principal display panel: "Warning: The safety of this product has not been determined."

It is not right, and is indeed dangerous, for the public to buy such products assuming the contents are harmless, when this is not the case. The "trade secret" laws of the perfume companies should not supersede the rights of consumers to make informed decisions. Calvin Klein needs to be held accountable for what it puts into its products.

Like tobacco smoke, the harmful chemicals currently used in these products can cause serious symptoms for many people, including those with asthma, allergies, multiple chemical sensitivity (MCS), epilepsy, and other immune or central nervous system illnesses. Children and fetuses are particularly vulnerable to toxic chemicals used by their parents, care givers and teachers.

My life was at one time drastically altered by my severe reactions to fragrance products, including "Eternity." Even a brief exposure to these toxic chemicals caused me asthma, headache, nausea, dizziness, rash, impaired cognition (my ability to think, concentrate, and make appropriate decisions becomes impaired, sometimes resulting in a worse exposure because I am not able to take the steps necessary to leave). These symptoms can persist for hours or days. Because of my severe

99P-1340

C189

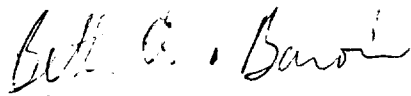

reactions to fragrance products in common use, I could not do my own grocery shopping or errands; I could not work or go to school; and I could not go to movie theaters or restaurants, or most other public places.

And yet, when I was at home, or outside, I felt perfectly healthy, able-bodied, and even robust. Toxins in perfume like "Eternity" CAUSED my condition to be disabling.

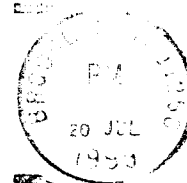

My case is no longer quite so severe. I am able to go to most public places without getting sick. And yet, I am never comfortable. I am always a little less able to concentrate, a little more irritable, a little less able to breathe when there are toxins such as those in "Eternity" and other fragrances in the air. Recent prevalence studies show that about 30% of the population has some chemical sensitivities. I believe that this percentage is low, because if I had not had an obviously disabling condition, I might not connect my low-level symptoms with exposures to toxins. In any case, the numbers are rising, partly because of the growing flood of new and more toxic products, like "Eternity," into the consumer market. Please act on behalf of the millions of people who have suffered physical illness and injury resulting from fragrance exposure at work, at school and in social settings. These toxic chemicals act as powerful barriers to people disabled by asthma and chemical sensitivities.

We cannot afford to continue to allow toxic chemicals to be put in fragrances without any attention or regulation. It's a matter of health, disability access, and simple consideration.

Sincerely,
Beth A. Baron
